

PHOTOCATALYSIS

INHALED MOSQUITO KILLER

High tech environmental protection and energy saving mosquito catching lamp
Humanized design and new experience of mosquito control.

Usage method

1. Please use the same voltage and frequency as this product
2. Make sure that the power cord is plugged in and connected to the power supply when the power is turned on to kill mosquitoes. At this time, the fan and LED light start to work. Pull out the power cord and stop working.
3. When cleaning mosquito residues, please turn off the power supply first. Take up the mosquito killing lamp with one hand and put it above the garbage can (to prevent mosquitoes from falling on the ground). Take out the mosquito storage box with the other hand in reverse direction to remove the mosquitoes.
4. After the mosquito is cleaned, the machine can be directly placed in the environment of mosquito killer for use.

Working principle

This product is a photocatalysis inhalation mosquito killer. LED lamp beads are used in the lamp tube. The light generated will lure the mosquito to approach the light source. The air generated by the fan will quickly inhale it into the mosquito box of the mosquito killer. Then it will be dried and dehydrated to die. Physical mosquito killing is non-toxic, smoke-free and tasteless.

Matters needing attention

1. When using the mosquito killer, turn off the light or reduce the light in the mosquito removal area as much as possible to avoid interference from other light sources (such as fluorescent lamp, TV, light outside the window, etc.). Avoid the strong wind (such as fan, air conditioner, etc.) to blow the machine directly. The best effect is to use the machine in the closed space without people present.
2. When the product is working, it is strictly forbidden to look at the light source for a long time, so as to avoid eye irritation caused by the light source.
3. In use, the mosquito killer should be placed in a place that children can't touch. Do not put fingers or metal objects into the body to avoid accidents.
4. If the power cord or fan is damaged, in order to avoid danger, please send it to a professional for maintenance or replacement.
5. When it is not used for a long time, please unplug the power plug and place it properly.

Use environment

Indoor use only (not suitable for barns, barns or similar places)

Common fault Guide

Fault phenomenon	Causes of common problems	processing method
The whole machine cannot be started	Power plug released	turn on electricity
The light is on, the fan does not turn or the fan does not turn, the light is not on	This is a product failure. Please contact the customer service of the company (the customer service telephone number can be found in the manual). If you can't contact the customer service, please ask the dealer who purchased the product for help.	
Fan has abnormal sound	There is foreign material in contact with the fan	Removal of foreign body

QUALIFIED CERTIFICATE

Product name: Photocatalyst mosquito lamp Date of inspection: _____
Product grade: Grade I Specification type: _____
Power usage: 5W Date of production: _____
Executive standard: GB4706.1-2005 Manufacturer: _____
Batch number: 001 Manufacturer's address: _____

The product meets the specified quality standard and is approved to leave the factory
